DHIA SUPERVISOR'S MANUAL REVISED

The DHIA Supervisor's Manual has been revised (February 1957) and issued as Agriculture Handbook 96.

The Manual serves as a handbook for supervisors and contains the up-to-date rules for conducting the work in an association, as approved by the American Dairy Science Association.

One of the important changes in the revised Manual refers to the identification of grade animals, using the nationwide uniform eartag numbering plan, (State code, 3-letter prefix, 4 digits) as discussed in Chapter XI and in Rule 3, Chapter XV. Compliance with Rule 3 is necessary if the lactation records of grade animals are to be processed satisfactorily and used to prove DHIA sires when all sire proving work is placed on electronic data processing tape equipment.

Copies of the Manual have been sent to all State Extension Dairymen for free distribution to supervisors of Standard Dairy-Herd Improvement Associations and to students in Standard DHIA Supervisor Training Courses.

Others may obtain a copy of the DHIA Supervisor's Manual, AH 96, by sending 40 cents (no stamps) to the Superintendent of Documents, Government Printing Office, Washington 25, D. C. DO NOT SEND TO THE DEPARTMENT OF AGRICULTURE.

DHIA PROVED SIRE RECORDS TABULATED IN APRIL 1957

Following is a list of 475 sires whose records were tabulated or retabulated by the Dairy Husbandry Research Branch in April 1957. Production records used in proving DHIA sires consist of 305-day lactation records standardized to a mature equivalent twice-a-day milking basis.

An asterisk at the end of a sire's registration number indicates a retabulated record. The asterisk may be followed by any number from 1 through 15 (i. e., *12) to indicate in which of the 15 printed lists his previous record appeared. Or the asterisk may be followed by the month and year (i. e., *May 51) of the DHIA letter in which his previous record appeared. Two asterisks following the sire's registration number, or following reference to a previous listing, indicate that the proved-sire tabulation or retabulation was requested by one of the States.

In case records from more than one herd were used, the reference is to the herd from which production records for the largest number of the sire's youngest daughters were reported. If the sire has been used in an artificial-breeding association, the name of the association is given.

Proved-sire records consisting of fewer than 10 comparisons are indicated as "preliminary proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

Proved-sire records consisting of fewer than 25 comparisons with daughters resulting from artificial breeding are indicated as "preliminary AB proofs" because these records may be significantly changed when additional comparisons become available and are included in the proved-sire records.

To make the most intelligent selection of a sire, the dairyman should use these proved-sire records to single out the most promising sire and then make every effort to supplement these data with additional information gathered from the herds in which the dams and daughters made their records. Particular attention should be given to the feeding practices and environmental conditions under which the records were made, in order to be assured that the records of the daughters were not made under more favorable conditions than those of the dams or vice versa. It is especially important to determine that there has been no selection of daughters in making the comparison.
